

Average Lab MELD and Average Match MELD
For 2007 and 2008, For Ages 11 and Older (MELD age range)
By Organ Procurement Organization and Recipient Blood Type
From ustransplant.org SRTR_web_mailbox@arborresearch.org

NOTES:

The first two digits of the OPO code tell the state where the OPO is located. However, OPOs may serve more than one state.

Some transplant recipients do not have a MELD score at transplant (i.e. Status 1, 1A, and 1B candidates; living donor candidates who were never on Lab MELD is calculated from serum bilirubin, serum creatinine, and INR.

Match MELD is used for allocation and includes extra points for certain exceptions (such as hepatocellular carcinoma) and/or those awarded

Data provided is as of February 1, 2009. Transplant numbers for 2008 may be incomplete due to lags in data reporting.

NOTES:

The first two digits of the OPO code tell the state where the OPO is located. However, OPOs may serve more than one state.

Some transplant recipients do not have a MELD score at transplant (i.e. Status 1, 1A, and 1B candidates; living donor candidates who were never on Lab MELD is calculated from serum bilirubin, serum creatinine, and INR.

Match MELD is used for allocation and includes extra points for certain exceptions (such as hepatocellular carcinoma) and/or those awarded

Data provided is as of February 1, 2009. Transplant numbers for 2008 may be incomplete due to lags in data reporting.
